NO CRADLE OR MUZZLE NEEDED HELPFUL HINTS:

5-Day Blister is a revolutionary, humane, water soluble blister used in the relief of bowed tendons, bucked shins, ankles, knees and suspensories.

DIRECTIONS:

1st DAY:

Apply full strength, first day only, using hands or leg brush. Work well into hair until heavy past-like lather is formed. Do not bandage. Wash hands with soap and water immediately after use.

2nd DAY:

Walk 15 minutes, morning and evening.

3rd, 4th, & 5th DAYS:

Morning, apply water, using a hose for 15 minutes. Walk 30 minutes. Evening, apply water, using a hose for 15 minutes. Walk 30 minutes.

After 5th day, horse may swim, be turbulated or returned to light training at trainer's discretion.

- If your horse is on a swimming program, swimming may be continued after one day's rest and walking. Water is very beneficial to the blistered area. If your horse is not on a swimming program, simply walk him approximately 30 minutes morning and evening and hose the blistered area 15 minutes before returning to stall or paddock after the one day's rest.
- After the 5th day, if directions have been followed, you will see the most complete, humane blistering that your money can buy. Your horse is still on his feed with no weight loss or stress factors apparent. He will be ready to accept his training in relation to the severity of the ailment for which he was blistered.
- Use 1 oz. per leg, from the knee through ankle, for an excellent blister. Rub into the leg well until a heavy lather appears. If more is used, no harm is done and has little or no effect. If applied accidentally to any area, simply flush well with clear water before it dries.
- When blistered, some horses may run a slight temperature, regardless of what product is used. As a precaution, it is suggested that no grain be fed 12 hours prior to, and 12 hours after blistering.

Postyme was the first company to manufacture a blister without the use of harsh, tissue destroying, mercury-based chemicals. All ingredients are government E.P.A. approved. There is no counterirritant on the market that compares to **Postyme 5-Day Blister**. More than 1,000,000 horses, the world over, have been blistered by leading trainers, using our original formula in the U.S., Canada, Puerto Rico, Mexico, South America, Japan, New Zealand, Australia and Europe.
